

Cognitive Orchestrator

Governed Vendor Onboarding · Design Partner Pilot

The problem

Vendor onboarding is slow, inconsistent, and hard to defend in an audit. Security questionnaires, spend thresholds, and data-classification rules live in spreadsheets and Slack threads. When a regulator or internal audit asks *why* a vendor was approved, the trail is incomplete.

The product

A self-hosted decision gate in front of vendor onboarding. Every approve, escalate, or reject writes a **hash-chained evidence pack**: request, policy, reasoning summary, human override (if any), and outcome. Risk and finance get an exportable audit trail. Procurement gets a faster, policy-consistent path.

How it works

- Policy first — auto-approve under threshold, human review above, reject restricted data classes.
- Optional reasoning layer — structured synthesis for borderline cases; not a black-box model call.
- Evidence pack — SHA-256 chained record per decision, exportable for audit.
- Self-hosted or dedicated instance — your keys, your network boundary.

Design Partner Pilot	
Fee	\$50,000 · 60 days · one workflow (vendor onboarding)
Includes	Dedicated instance · policy tuned to your spend and data classes · evidence packs for every decision · weekly review with risk/finance · conversion credit of 100% of pilot fee toward year-1 platform (\$250–500k)
Success criteria	≥25 live decisions through the gate · risk or finance signs that the pack is usable in your process · no critical security findings that block production
If success is met	Platform agreement starts within 30 days of pilot end. Pilot fee fully credited.

Who this is for

Organizations with meaningful vendor volume and a real audit or procurement constraint: fintech and payments, healthtech, industrial supply chains, and professional-services firms that gate client-side vendors. The economic buyer is typically Head of Procurement together with CISO/Risk, or VP Finance Ops when spend control is the primary lever.

What we will not do in the pilot

No open-ended “AI experiment.” No free API access without a conversion path. No multi-workflow scope until the vendor-onboarding pack is accepted.

Next step

A 30-minute discovery call to confirm decision volume, who owns the audit trail today, and whether a 60-day pilot fits the current review cycle. If there is a fit, we send a short SOW.
