

Statement of Work

Design Partner Pilot — Governed Vendor Onboarding

This Statement of Work (“SOW”) is between **Mourad Soltani / Cognitive Orchestrator** (“Provider”) and **[Company Legal Name]** (“Customer”). It covers a fixed-scope pilot of the governed decision gateway for vendor onboarding.

1. Scope

Provider will deploy a dedicated instance of the Cognitive Orchestrator governed-decision gateway configured for Customer’s **vendor onboarding** workflow only. Scope includes:

- Policy thresholds for spend, data classification, and monthly budget, tuned with Customer.
- Decision API and audit export (hash-chained evidence packs).
- Up to weekly working sessions with Customer’s risk/finance and procurement stakeholders.
- Security review support reasonable for a 60-day pilot (architecture overview, data-handling note).

Out of scope: additional workflows, custom model training, multi-region HA, and production SLA beyond pilot availability.

2. Term and fee

Term: 60 days from the Start Date (the date the instance is available to Customer). **Fee:** USD \$50,000, payable within 15 days of the Start Date (or per Customer’s standard PO cycle if agreed in writing). If Success Criteria in Section 4 are met, 100% of the pilot fee is credited toward the first year of a platform agreement (\$250,000–\$500,000 annual, final tier set in the platform order form).

3. Customer responsibilities

- Name a single pilot owner and make risk/finance available for weekly review.
- Provide policy inputs (spend thresholds, blocked data classes, budget).
- Route at least the volume needed to exercise Success Criteria through the gateway.
- Complete a reasonable security questionnaire within the first 15 days if required by Customer process.

4. Success criteria

The pilot is successful if all of the following are true by the end of Term:

- At least **25 live decisions** processed through the gateway.
- Customer’s risk or finance stakeholder confirms in writing that the evidence pack is usable in their review or audit process.
- No critical security finding that Customer reasonably determines blocks production use.

If success is met, the parties will execute a platform order form within 30 days of Term end. If success is not met, either party may end the engagement with no further platform obligation; the pilot fee remains earned for work performed unless otherwise agreed in writing.

5. Data and security

Customer retains ownership of its data and evidence packs. Provider does not use Customer decision content to train foundation models. Deployment is self-hosted by Customer or on a dedicated instance under Provider’s control, as elected at Start Date. Each party will apply reasonable administrative and technical safeguards appropriate to the pilot.

6. IP and confidentiality

Provider retains all rights in the gateway software and documentation. Customer receives a limited, non-exclusive license to use the pilot instance for the Term. Each party will keep the other’s non-public information confidential and use it only to perform under this SOW.

7. Limitation

Except for confidentiality breaches or willful misconduct, each party’s total liability under this SOW is limited to fees paid under this SOW. Neither party is liable for indirect or consequential damages. The gateway is provided for pilot use; production warranties and SLAs are defined only in a subsequent platform agreement.

8. Signatures

Provider	Customer
